Deloitte Assisted Redaction

Save time with automation

Redacting confidential information – Performing redactions requires significant attention to detail and may be quite time-consuming. Leveraging Optical Character Recognition (OCR) technology, we have the potential to bring efficiency and improved accuracy in identifying and redacting confidential information.

Working with privilege documents - Deloitte Assisted Redaction transforms the process of identifying and protecting privileged, business confidential and personal information. Deloitte Assisted Redaction takes this a step further by easily automating redactions based on user-defined terms during document review.

Efficient review integration – Deloitte Assisted Redaction accelerator integrates with the suite of accelerators built on Relativity’s eDiscovery platform that helps expedite applying redactions on large, complex data sets in a faster and systematic manner.

Save time and cost - Deloitte Assisted Redaction may potentially reduce the time required for redaction review while providing consistent, careful results. Deloitte Assisted Redaction is built into the Relativity workstream, automating and enhancing the review workflow.

The Assistant - Deloitte Assisted Redaction technology is a “first pass” accelerator designed to help reduce the time and expense of discovery by expediting the redaction process. Deloitte Assisted Redaction provides the ability to find and redact terms, including Personally Identifiable Information (PII) like social security numbers and birthdates.

Deloitte Assisted Redaction

Potential benefits

Relativity Integration

Works with both on-premise and RelativityOne platforms. View results in the same layout with the normal redaction review process.

Expedited Reviews

Expedite redaction processing by pre-applying redactions to searchable terms.

Sweep for PII

Use the power of regular expression to sweep for PII, such as social security numbers, phone numbers, birthdates, or any combination of the desired text.

Potential Savings

Let the machine do the work. Automating the first pass redaction can save the staffing expense of performing this review.

Language support

Flexible languages allow for search terms to be redacted across multiple languages, including Hebrew, Chinese, Japanese, and Korean.

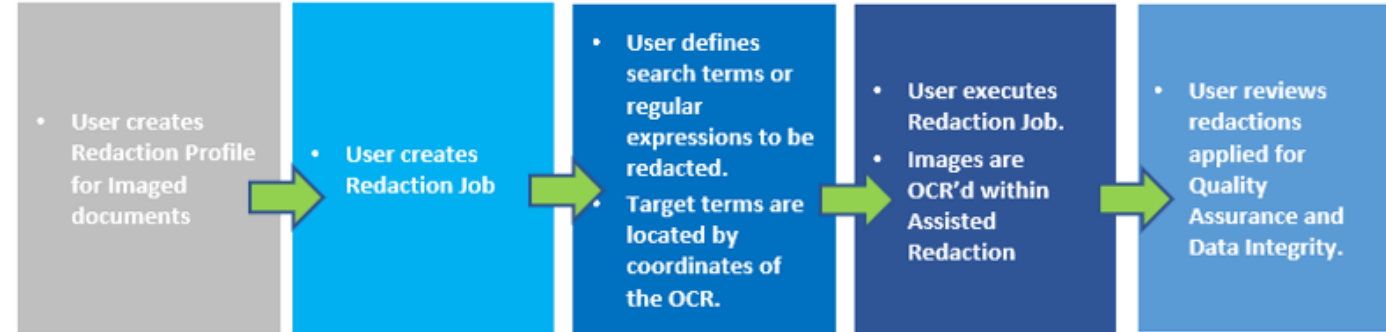

Flexible redaction options

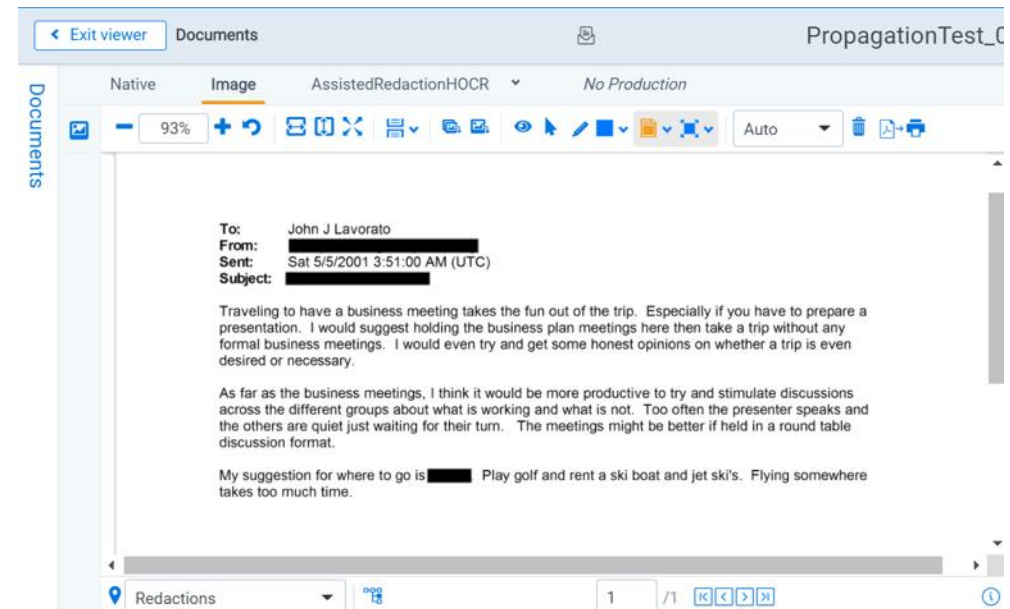

Multiple redaction profiles allow for redaction formations to be saved and reused. Perform whole word, whole line, paragraph, page, inverse redaction, highlights, text overlay redactions, and other Relativity standard formats.

Deloitte Assisted Redaction Workflow

How it works - The application may be accessed via a tab in Relativity. Users may define parameters of a saved search, as well as the search term or regular expression that will be the target of redactions. A quality check for each redaction is done to maintain the integrity of the documents.

The Results - Once the redaction process is complete, the redactions may be reviewed via the MarkupSet.
