

## KPMG PII Extractor

Projects involving personally identifiable information (PII) such as Data Subject Access Requests (DSARs) and PII Identification and Review following a Cyber Incident are on the rise and can be disruptive and time-consuming undertakings for organisations. The review and accurate extraction of PII is often done manually and under immense time-pressure from the data subject or the regulator. This can lead to costly mistakes, regulatory fines, and follow-on litigation. Thankfully, KPMG has developed a reliable and fast application for improved speed and quality of your PII reviews, meet the KPMG PII Extractor.

## Intuitive and Fast

The KPMG PII Extractor is a solution developed by KPMG aimed at simplifying and accelerating the extraction of personal information data sets. The solution is designed as an add-on to the RelativityOne document review platform. It allows the user to select PII directly in the Relativity viewer, and assign it a category (e.g. home address, phone number, credit card details), as well as link that PII to a specific data subject on the fly.

Without the PII Extractor, extracting information from a document directly from the Relativity viewer

would have to be done by copying and pasting. Alternatively, the Case Dynamics application could be used, however it is not designed for this purpose and performance drops considerably when working with many records.

## Key Features

- ✓ Lightweight JavaScript toolkit
- ✓ Intuitive and easy to use interface to enhance review accuracy
- ✓ Extracted content can be edited on the fly
- ✓ Loads over 10,000 data subjects, categories and PII within seconds
- ✓ Does not need to be reloaded between switching documents
- ✓ Includes dynamic filtering
- ✓ Includes Relativity's out of the box dashboards
