

# THE TOP REVIEW PLATFORM NOW INTEGRATES WITH THE TOP TRANSCRIPT MANAGEMENT PLATFORM

Case teams can now seamlessly move from the document review process to preparing for depositions, motions and trial.

With our latest integration, teams may preview Opus 2 transcripts from within Relativity as well as earmark key documents for use in the **Opus 2 Magnum™** case analysis platform—where the documents develop into deposition exhibits and live alongside transcripts, video and everything that goes into creating the case story. The Magnum cloud-based workspace is shared by every member of the case team and offers anytime, anywhere access to a single instance of each document, exhibit and transcript. Sophisticated collaboration tools yield incredible efficiencies and foster stronger legal arguments.

GREAT THINGS HAPPEN WHEN THE BEST & THE BEST WORK TOGETHER.

DEPO & TRIAL PREP

## SIMPLIFY THE PROGRESSION FROM DISCOVERY DOCUMENT TO TRIAL EXHIBIT

Relativity choice fields, document-level tagging and other metadata is maintained upon import into the Opus 2 Magnum workspace. Magnum users organize the documents within witness kits and theme binders to facilitate the questioning of witnesses, and as documents advance to deposition or trial exhibits, their labels and dates of admission are logged alongside the original metadata from Relativity.

## DEVELOP THE CASE STORY AND RETURN TO THE DOCUMENT WELL

As case analysis progresses in Opus 2 Magnum, the documents are enriched with annotations, note-level issue tags, and links to related testimony or documents.

The dynamic, side-by-side view of testimony and referenced documents makes the job of comparing how multiple witnesses testified to the same documents and facts a breeze. And as new case themes are revealed, the team may revert to Relativity to acquire further documents that support the new strategies and then resume their collaborative case analysis in the Opus 2 Magnum workspace.

Opus 2 transcripts may also be previewed within Relativity, enabling a more symbiotic experience as the case themes evolve.
